FIG. 3 and FIG. 4 are perspective views of a foldable structure, likely a display or a container. FIG. 3 shows the structure in a partially folded state, with a main panel 28 and a side panel 30. The main panel 28 is connected to a base 34 via a hinge 42. The side panel 30 is connected to the main panel 28 via a hinge 44. The side panel 30 is further divided into a top section 32 and a bottom section 36. The top section 32 is connected to the main panel 28 via a hinge 46. The bottom section 36 is connected to the base 34 via a hinge 48. The side panel 30 is also connected to the base 34 via a hinge 50. The side panel 30 is further divided into a top section 38 and a bottom section 40. The top section 38 is connected to the main panel 28 via a hinge 52. The bottom section 40 is connected to the base 34 via a hinge 54. FIG. 4 shows the structure in a fully folded state, with the main panel 28 and the side panel 30 folded together. The side panel 30 is connected to the main panel 28 via a hinge 46. The side panel 30 is further divided into a top section 32 and a bottom section 36. The top section 32 is connected to the main panel 28 via a hinge 48. The bottom section 36 is connected to the base 34 via a hinge 50. The side panel 30 is also connected to the base 34 via a hinge 52. The side panel 30 is further divided into a top section 38 and a bottom section 40. The top section 38 is connected to the main panel 28 via a hinge 54. The bottom section 40 is connected to the base 34 via a hinge 56.
